

ECOSTREAM™

INNOVATIVE TANK SYSTEMS

Picture showing a 250Ltr system with Reverse Osmosis Filter Option

The ECOSTREAM™ range of tank systems represent excellent value for money as they are modular in design and can be fixed into vehicles permanently without the need of a stainless steel frame to do so. This allows significant savings to be made over against traditional systems, without compromising on the professional image that window cleaners always strive for.

All tanks are baffled to restrict water movement in transit. The tanks also allow for pump, controller, filter and hosereel components to be fitted directly to them, ensuring best use of the compact designs and maximising van space. There are packages designed to suit every need from straight forward water delivery units, ie. pump and controller only to demineralising and reverse osmosis systems or a combination of both, depending on customers' requirements.

Added to this comprehensive offering is a range of hose reel options to make the ECOSTREAM™ Tank Systems probably the most versatile and cost effective van mounted systems on the market today!
